

edubreak[®] *dialog*

Synchronous and location-independent exchange via video

Video conferencing in edubreak®

Complementary to Social Video Learning, **live video conferences** can be planned and conducted directly in edubreak® with edubreak®*dialog*. This enables the learning group to smoothly engage in synchronous, personal exchange across locations.

Recordings for asynchronous follow-ups

Meetings and webinars can be **automatically recorded** on demand and made available for documentation and discussion in the video library of the course. Course members who were not able to participate are thus given the opportunity to view the recording afterwards in their own course environment. With **video comments**, they can ask questions asynchronously, continue conversations from the meeting, and start new discussions.

Technology

The video conferencing solution for edubreak®*dialog* is fully integrated in edubreak®. We rely on the **stable and flexible technology** of Zoom.

Due to the direct integration of Zoom into edubreak®, participants do not need a separate Zoom account.

- Conveniently create and schedule online meetings and webinars via the campus
- Start, record and save dialogs directly in the course
- Chat function (1-to-1 / group chat)
- Screen sharing (also from mobile devices)
- Collaborative annotation of shared screens
- Whiteboard function
- Breakout rooms
- Mobile participation possible via edubreak®APP / Zoom App

Didactics

- Use of video conferences as a central element in **blended learning scenarios** - for an optimal mix of asynchronous and synchronous learning phases, as an alternative or complement to on-site learning.
- Ideal tool for **location-independent** and yet **personal** communication
- Support of **collaborative working** through screen sharing and the use of virtual whiteboards
- Enabling **coordinated task-sharing** in a joint communication environment through the use of breakout rooms
- Possibility to record the video meeting and process it asynchronously in edubreak® using video comments, zoom and drawing tools
(Social Video Learning)

Optional add-on edubreak®*adhoc-dialog/webinar*

With this add-on, persons without an edubreak® account can also actively participate in online meetings and webinars. Thus, organizations can conduct all their internal and external video communication via their own edubreak®CAMPUS and record it on demand.

Ad-hoc dialogs and webinars take place outside of a course. A generated direct link gives all participants quick and easy access to the corresponding dialog. In addition, comprehensive hosting and moderation functions enable a smooth and appealing execution of online meetings and webinars in edubreak®.

Data protection: FAQ

Which data is processed?

While conducting or participating in online meetings or webinars, video images, audio and, if applicable, screensharing are transmitted and processed. Each participating person can actively determine whether the webcam is active and a microphone is used.

edubreak® only transmits a pseudonymized name to Zoom to display the participants.

Is data passed on to third parties?

No. A contract for data processing has been concluded between Ghostthinker and Zoom. No data is passed on to other parties.

Is data processed outside the European Union?

No, only data centers in Germany are used.

Can Zoom be used in a GDPR compliant manner?

We have concluded an EU Data Processing Addendum with the Zoom provider, incorporating the EU Standard Contractual Clauses (SCCs). Together with our data protection officer, we are monitoring current developments in the area of German and European data protection very closely. This also includes the possible adaptation and renewal of the order processing contracts, if necessary.

How does the use of Zoom within edubreak®*dialog* differ compared to a (free) Zoom account?

By connecting Zoom to edubreak®, there is a more privacy-preserving use of Zoom in several respects. The email address is not transmitted from edubreak® to Zoom. When joining an ongoing dialog, the first and last name are transmitted pseudonymously from edubreak® and displayed as "Maxim M.", for example. Only German data centers are used to conduct the meetings and webinars.

edubreak®*dialog* in a nutshell:

- synchronous video meetings and webinars
- integrated in the edubreak® learning environment
- recording and upload functions
- can be used for internal and external communication
- enhanced data protection due to ISV partnership with Zoom

Prices and information

For pricing and further information, please contact our team.

Do you have further questions about edubreak®? Are you looking for a specific blended learning solution for your organization? We look forward to hearing from you and contributing to the successful conception and implementation of your educational ideas!
